

# IntraPac Metal Tubes

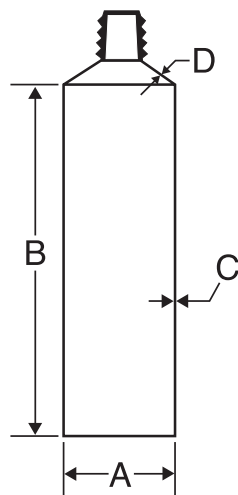

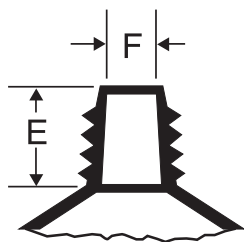

There are many reasons why collapsible metal tubes are so widely used today. Foremost is the ability to easily control the amount of product dispensed by simply removing the cap and lightly squeezing the tube. Collapsible metal tubes flatten as the product is removed, changing shape to match the volume of the remaining contents, therefore minimizing contaminants like air and moisture from entering the container.

The closure provides a quick and secure seal for nearly every size and style of tube. And the low cost, easy disposability and recyclability of metal tubes provide attractive advantages for today's manufacturers.

## Tube Structure

Tubes have a nomenclature, like many products, all their own. When ordering a tube, refer to and know the following key parts.

- A. Outside Diameter
- B. Body Length
- C. Wall Thickness
- D. Shoulder Thickness
- E. Neck Length
- F. Neck Orifice Diameter

Keep in mind when requesting quotations, the following facts help us serve you better:

1. Product to be packaged
2. Diameter
3. Length
4. Neck Size and Type for opening
5. Cap Style and Color
6. Number of Print Colors with PMS Designations
7. Special Features, if any
8. Quantity
9. Delivery desired
